

DUST COLLECTORS

WHY USE A DUST COLLECTOR?

POINT OF SOURCE EXTRACTION

Industrial vacuuming is a key element in ensuring cleanliness and efficiency in working environments. Volatile and airborne dust are indeed a common problem in industry, especially in sectors such as woodworking, cement and ceramic production and the food industry. Managing these waste materials is critical to ensuring a safe and clean work environment, and to maintaining high standards of efficiency and productivity.

FAST AND EFFICIENT CLEANING

of the workspace and its surroundings

SAFETY

for the workers and the work environment

PRODUCTIVITY

reducing accidents and downtimes

SAFETY FOR WORKERS AND WORK ENVIRONMENT

STURDY METAL CONSTRUCTION

Increased durability and suitability for heavy-duty tasks.

HIGH PERFORMANCES

Extensive selection of suction units to fit every specific application.

HIGH CUSTOMIZATION

Wide manufacturing optionals to satisfy specific requirements.

Breathe safely with the right vacuum for fine or hazardous dust. Using a dust collector protect workers and the environment from fine or hazardous dust exposure. Depureco vacuums come standard with M-class filters for everyday protection. For the toughest jobs and the highest level of safety, you can upgrade to H-class filters. H-class filters capture even finer particles, ensuring maximum protection.

HOW TO CHOOSE?

AIRFLOW

SUCTION UNIT

The unit is equipped with a powerful electric fan capable of producing a huge airflow able to collect all kinds of airborne dust and particles, keeping a safe work environment.

	DF 075	DF 22	DF 40
INLET DIAMETER	3 in 4 in 5 in	4 in 5 in 6 in	6 in 7 in 8 in
AIR FLOW (CFM)	211 424 564	564 707 989	1058 1483 1907

FILTER CLEANING SYSTEM

MANUAL

The vacuum cleaner is equipped with a lever connected directly to the filter. The vertical movement of the lever compresses the filter, causing the material to detach from the surface of the filter and fall into the container.

Available also with pneumatic shaker (PSC).

PSC

The vacuum cleaner is equipped with a pneumatic piston connected directly to the filter. The vertical movement of the piston compresses the filter, causing the material to detach from the surface of the filter and fall into the container.

It requires compressed air to operate.

SP

Each filter cartridge is cleaned at adjustable intervals by a high-pressure (90 PSI) air jet, which shakes the cartridge, dislodging large amounts of material from the filter, making it completely clean in a matter of seconds.

It requires compressed air to operate.

APPLICATION

Code Ø 100: P12336/100

Code Ø 160: P12336

ARTICULATED ARM

Articulated arm able to be bent in any position you need to extract non combustible light dust that becomes airborne keeping the work environment safe. The arm comes with a flow regulator to module the suction power.

Code Ø 100: P12788

Code Ø 150: P12370

ATEX ARTICULATED ARM

Articulated arm, made of stainless steel, able to be bent in any position you need to extract combustible dust to avoid any combustion and avoid potential danger, keeping your work environment safe. The arm comes with a flow regulator to module the suction power.

DIRECT EXTRACTION

A flexible hose connects the dust collector directly to the source to vacuum the dust directly from the machines.

FILTRATION OPTIONS

M CLASS

Polyester filter for dust category M.
Filtration efficiency down to 1µ.

ANTISTATIC M

Antistatic polyester filter with increased surface area for dust category M.
Filtration efficiency down to 1µ.

NOMEX

High temperature resistant filter ideal for hot dust extraction.

ACTIVE CARBONS

Activated carbon filter to retain odours.

PTFE

Teflon-blended polyester filter, particularly suitable for vacuuming up fine dust and sticky materials.

M CLASS CARTRIDGE

Polyester antistatic cartridge for dust category M.
Filtration efficiency down to 1µ.

HEPA 13

Absolute cartridge filter for very fine dust with high filtration efficiency.
